DATA SHIELD

Secure file sharing server.

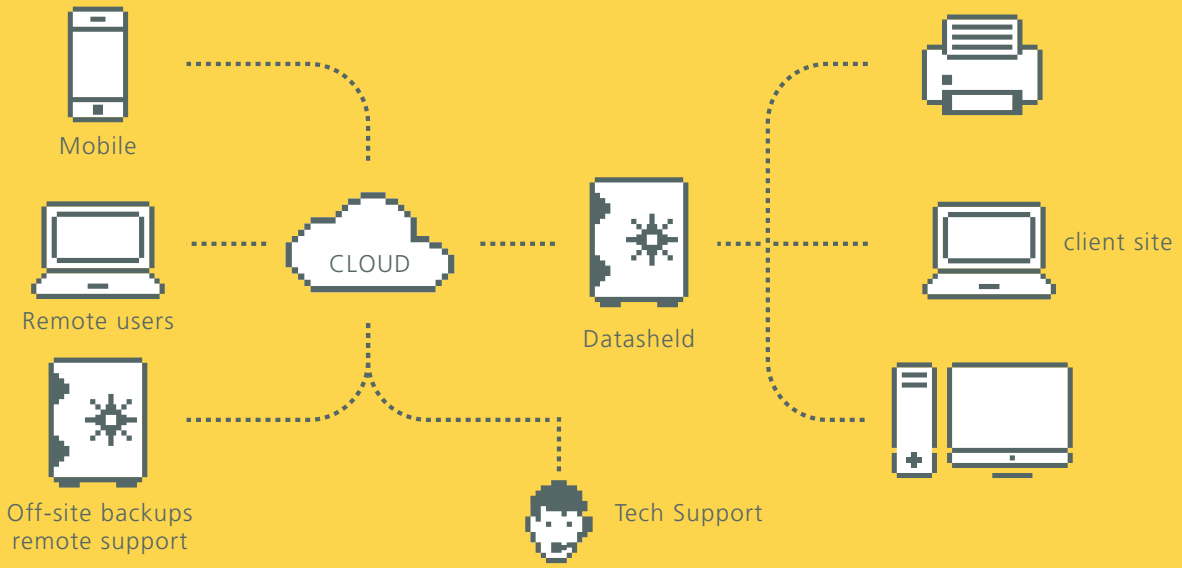
Business data is available across multiple devices when and where you need it.

DataShield - Product Overview

DataShield7 from SevenC is a file sharing server that enables you to store business critical documents and information centrally and securely. Designed with collaboration in mind, DataShield7 allows users to work together on documents on the file server and access them from wherever they are. There's no longer a risk of users losing information when a device gets lost or stolen and your business data can now be accurately monitored and controlled. DataShield7 is also the perfect product to sit alongside any cloud-based services or applications, such as Hosted Exchange or hosted ERP solution.

- Stable, fully-managed, on-site Linux file sharing server with 24/7/365 support
- Store all your business docs in a central place – where everyone can access them
- Work together, share information and protect against data loss
- It's the perfect complement to cloud-based email services such as Hosted Exchange
- Access important docs from anywhere in the world
- No upfront set up costs or annual licence fees

DataShield Stucture



"Changes anyone makes are synchronized across all devices."

> "Collaborate in a central space."

DataShield - Includes

Data storage

DataShield7 has been designed to efficiently and cost-effectively store all of your business's critical information.

It acts as a central repository for user profiles and references, and offers comprehensive user personalisation. DataShield7 is ideal for multi-user businesses that require a single, secure repository for files and applications.

Network Security

SevenC's Firewall7 service (included) provides the single default gateway to the internet for the local network. DSL, satellite, wireless and leased–line internet connectivity is supported, as well as all forms of internet communication (HTTP, SMTP, FTP, POP, IMAP, etc.). Firewall7 is able to accommodate a wide variety of electronic security requirements and employs the IpTables

Collaboration

SevenC's Group7 (included) offers comprehensive collaboration functionality, including company-wide shared appointments, contacts database, tasks, and timesheets.

> "The safe way to store and share business information."
