MAIL ACTIVE

Business Email service.

Fully supported mobility, security and storage bundle for your electronic mail

MailActive - Product Overview

MailActive from SevenC is a complete messaging platform for your business. Email is mission-critical to both service delivery and employee productivity, and in today's environment your business requires rich and efficient access to email, calendars, attachments and contacts from a range of locations and devices. MailActive delivers a messaging system that addresses these needs.

- Stable, fully-managed, on-site Linux mail server with 24/7/365 support
- Access and manage your mail from multiple places (it's time to get rid of POP mail)
- Protect your network from viruses and spam
- Save on bandwidth costs
- Integration with mobile devices
- No upfront set up costs or annual licence fees
- Email continuity

"Comply with relevant Email archiving legislation."

MailActive - Includes

Sending, receiving, and storage of users' email

The MailActive email server downloads all email originating from the internet on behalf of the users, thereby removing the need for users to download their email individually. Users' incoming internet email is captured by MailActive and then pushes the captured email messages through at configurable time intervals.

Store-and-forward email service

The mail service is facilitated through the careful integration of Sendmail, Uucp, Dovecot, MailScanner-7C, NameD for DNS, Nova7, Syslog, Cron, F-Prot, ClamAV, and other sub-systems so that Email is spooled during power failures.

Local vs. remote email delivery

The MailActive server distinguishes between local and remote delivery of email. Local email is delivered to the MailActive server without incurring bandwidth traffic across your internet link. MailActive supports all standard email clients, including Microsoft Outlook, Pegasus, Netscape Communicator, Mozilla Thunderbird and Apple Entourage, as well as delivery of mail to all smartphone email clients.

Support

SevenC offers 24/7/365 monitoring and software maintenance.
